The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 11; 34pp; Japanese.

ention describes peptides of amino acid sequence (I) and their (I) are useful as platelet aggregation inhibitors and are easily by the body. Due to the presence of the N-terminal guanidino or group, (I) are provided with excellent stability so that their y can be exhibited for an effective time after administration. Ter they are readily metabolised and expelled. This is the amino quence of a platelet aggregation inhibitor peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino o amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.

The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino o amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ou)

(I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino arial semence of a platelet aggregation inhibitor peptide.

Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             contain

The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /label= OTHER

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               contain

                                                                                                                                                                  The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                            salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. guanidino or amidi
```

group

amidino

droab;

guanidino

```
The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino on amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    contain

The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ou)

       The invention describes peptides of amino acid sequence (I) and their salts. (I) are useful as platelet aggregation inhibitors and are easily absorbed by the body. Due to the presence of the N-terminal guanidino or amidino group, (I) are provided with excellent stability so that their activity can be exhibited for an effective time after administration. Thereafter they are readily metabolised and expelled. This is the amino acid sequence of a platelet aggregation inhibitor peptide.
                                                                                                                                                                                                              Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Si3894
histidinol dehydrogenase (EC 1.1.1.23) - wild cabbage (fragment)
C; Species: Brassica oleracea (wild cabbage)
C; Species: Brassica oleracea (wild cabbage)
C; Date: 15-Jun-2001 #sequence_revision 15-Jun-2001 #text_change 15-J
C; Accession: Si3894
R; Nagai, A.; Scheidegger, A.
Arch. Biochem. Biophys. 284, 127-132, 1991
A; Title: Purification and characterization of histidinol dehydrogens
A; Reference number: Si3894; MUID: 91112783; PMID: 1989490
A; Accession: Si3894
A; Molecule type: protein
A; Residues: 1-3 < NAG>
A; Residues: 1-3 < NAG>
A; Experimental source: var. capitata
C; Keywords: dimer; NAD; oxidoreductase
                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TRH-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-Jun-2001 #text_change
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A43391
TRH-like tripeptide - alfalfa
C;Species: Medicago sativa (alfalfa)
C;Date: 15-Jun-2001 #sequence_revision 15-Jun-2001 #text_chang
C;Accession: A43391
C;Accession: A43391
C;Accession: A43391
A;Title: Isolation and structural determination of a novel TRH
A;Reference number: A43391; MUID: 92388092; PMID: 1517203
A;Accession: A43391
A;Molecule type: protein
A;Residues: 1-3 < LAC>
A;Residues: 1-3 < LAC>
C;Keywords: amidated carboxyl end; pyroglutamic acid
F;1/Modified site: pyrrolidone carboxylic acid (Gln) #status e
F;3/Modified site: amidated carboxyl end (Pro) #status experim
                                                                                                                                                                                                                                                                                                                                   Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indel

Pept. Protein Res. 39:258-264(1992).
FUNCTION: Neuroexcitatory peptide; increases the impulse frequency and produces a spike broadening of the identified heart excitatory neuron (PON); also enhances the amplitude and frequency of the heart beat. Has also an effect on several other muscles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 acid

-!- MISCELLANEOUS: These peptides are released from mast cells in cand other tissues) during hypersensitivity reactions (and other tissues) during hypersensitivity affecting (anaphylaxis). Their activities, preferentially affecting (anaphylaxis). Their activities, chemotactic deactivation, releasinophils, include chemotaxis, chemotactic deactivation, releasinophils, include chemotaxis.
                                                                                                                                                                                                                                                                                           οĘ

"The expansion behaviour of sea anemones may be coordinated by inhibitory neuropeptides, Antho-KAamide and Antho-Rlamide.";
Proc. R. Soc. Lond., B, Biol. Sci. 253:183-188(1993).
-!- FUNCTION: Inhibits spontaneous contractions in several musc groups. May be involved in the expansion phase of feeding behaviour in sea anemones.
-!- SUBCELLULAR LOCATION: Secreted.

Sequence 12, Application US/07820154A
Patent No. 5382425
GENERAL INFORMATION:
APPLICANT: Cochran Ph.D., Mark D
APPLICANT: Junker M.S., David E
TITLE OF INVENTION: Recombinant Swinepox Virus
NUMBER OF SEQUENCES:
ADDRESSEE: John P. White
STREET: 30 Rockefeller.Plaza
CITY: New York
STATE: New York
COUNTRY: USA
ZIP: 10112
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/820,154A
FILING DATE: 19920113
CLASSIFICATION: 424
ATTORNEY/AGENT INFORMATION:
NAME: White, John P
